**The DelFly** G.C.H.E. de Croon, M. Perçin, B.D.W. Remes, R. Ruijsink, C. De Wagter, 2015-11-26 This book introduces the topics most relevant to autonomously flying flapping wing robots: flapping-wing design, aerodynamics, and artificial intelligence. Readers can explore these topics in the context of the DelFly, a flapping wing robot designed at Delft University in The Netherlands. How are tiny fruit flies able to lift their weight, avoid obstacles and predators, and find food or shelter? The first step in emulating this is the creation of a micro flapping wing robot that flies by itself. The challenges are considerable: the design and aerodynamics of flapping wings are still active areas of scientific research, whilst artificial intelligence is subject to extreme limitations deriving from the few sensors and minimal processing onboard. This book conveys the essential insights that lie behind success such as the DelFly Micro and the DelFly Explorer. The DelFly Micro, with its 3.07 grams and 10 cm wing span, is still the smallest flapping wing MAV in the world carrying a camera, whilst the DelFly Explorer is the world's first flapping wing MAV that is able to fly completely autonomously in unknown environments. The DelFly project started in 2005 and ever since has served as inspiration, not only to many scientific flapping wing studies, but also the design of flapping wing toys. The combination of introductions to relevant fields, practical insights and scientific experiments from the DelFly project make this book a must-read for all flapping wing enthusiasts, be they students, researchers, or engineers.

**Aerodynamic Design of Transport Aircraft** E. Obert, 2009-04-16 The origin of Aerodynamic Design of Transport Aircraft stems from the time when the author was appointed part-time professor in the Aerospace Faculty of Delft University of Technology. At the time his main activities were those of leading the departments of Aerodynamics, Performance and

Preliminary Design at Fokker Aircraft Company. The groundwork for this book started in 1987 as a series of lecture notes consisting mainly of pictorial material with a minimum of English explanatory text. After the demise of Fokker in 1996 one feared that interest in aeronautical engineering would strongly diminish. As a result of this, the course was discontinued and the relationship between the author and the faculty came to an end. Two years later the situation was reappraised, and the interest in aeronautical engineering remained, so the course was reinstated with a former Fokker colleague Ronald Slingerland as lecturer. The lecture notes from these courses form the foundation of this publication.

**The Nightless City of The Geisha** D.E. De Becker,2012-11-12 First Published in 2005. The Japanese geisha is the ultimate erotic icon - the courtesan par excellence - and this is her definitive book. The life of the geisha is the most secret and traditional in Japan, and today remains largely unchanged and unknown behind the tea house doors. This remarkable work was the first to reveal the hidden world of the geisha of the famous Yoshiwara quarter of Tokyo, the 'nightless city', and it has never been surpassed. Written over a hundred years ago, it is a meticulous description of every aspect of geisha life there, including the history of the geisha, life stories of famous geisha, the decoration of the tea houses, the different grades of courtesans, their costumes and hairstyles, the instruction of young girls brought to the tea houses, the art of selecting a geisha for the evening, proper conduct on the morning after, erotic practices and charms used by geisha to attract lovers. The vibrant life of the Yoshiwara quarter is evoked with finesse, portraying the procurers and madames, the festivals and geisha processions, even the menus of the tea houses, along with such matters as forms of contracts between brothels and courtesans. Profusely illustrated with photographs, prints and drawings, this is an essential volume for all who are fascinated

by the sophisticated sensuality of the willow, the cherry blossom and the silken kimono.

*Functional Polymers in Sensors and Actuators* Akif Kaynak, Ali Zolfagharian, 2020-08-31 Recent advances in the fabrication techniques have enabled the production of different types of polymer sensors and actuators that can be utilized in a wide range of applications, such as soft robotics, biomedical, smart textiles and energy harvesting. Functional polymers possess dynamic physical and chemical properties, which make them suitable candidates for sensing and actuating tasks in response to external stimuli, such as radiation, temperature, chemical reaction, external force, magnetic and electric fields. This book focuses on the recent advancements in the modeling and analysis of functional polymer systems.

*Frontiers in Sensing* Friedrich G. Barth, Joseph A. C. Humphrey, Mandyam V. Srinivasan, 2012-09-13 Biological sensory systems, fine-tuned to their specific tasks with remarkable perfection, have an enormous potential for technical, industrial, and medical applications. This applies to sensors specialized for a wide range of energy forms such as optical, mechanical, electrical, and magnetic, to name just a few. This book brings together first-hand knowledge from the frontiers of different fields of research in sensing. It aims to promote the interaction between biologists, engineers, physicists, and mathematicians and to pave the way for innovative lines of research and cross-disciplinary approaches. The topics presented cover a broad spectrum ranging from energy transformation and transduction processes in animal sensing systems to the fabrication and application of bio-inspired synthetic sensor arrays. The various contributions are linked by the similarity of what sensing has to accomplish in both biology and engineering.

**Birth Day**, 2013 A round the world journey of a mother, photographer and journalist, documenting the ways in which the world welcomes its children.

Between Science and Technology Andries Sarlemijn, Peter Kroes, 1990 This book contains the papers presented at a conference organised in honour of H.B.G. Casimir's 80th birthday. Outstanding scientists from different fields of research were invited to discuss important recent developments and put them in a broader perspective. The resulting book is devoted to the following relationships between fundamental physical research and technological developments: - the prognoses of technologically relevant phenomena on the basis of physical research; - the dependence of technological developments on physical research; - the spin-off of physical research for other disciplines; - the fact that fundamental research is required for the advancement of physics in general and of applied physics in particular. The famous Dutch physicist H.B.G. Casimir has made substantial contributions to the development of 20th century physics and was for several years head of Philips Research Laboratories. The diversity of topics addressed in this book reflects his wide range of interests
